

ABOUT THE COMPANY

VF, a. s. is a successful and reliable partner in the field of Radiation Protection and Monitoring, that provides its clients with flexible, technologically advanced, high quality solutions tailored to the client's needs and expectations. The high level of quality found in VF products and solutions is made possible thanks to a team of specialists with experience from many different projects in Radiation Protection and Monitoring not only in the Czech Republic but in many other countries worldwide. VF incorporates a high quality technology base, with which we are able to fulfill the high industry standards in Radiation protection and Monitoring at competitive costs. Our technological base includes among others:

- A Technology Centre designed specifically for research and development of new products.
- A Production Base which secures the production of all our products and the completion of complex systems.
- A Realization & Service Centre which is responsible for the design and completion of all projects as well as providing service.
- An Accredited Metrological Laboratory for ionizing radiation.
- A Hot Cell for work with high-activity addition sources.
- A Training Centre to teach and share experiences in Radiation Protection and Monitoring.

The five main areas in which we offer products and solutions include:

- Nuclear Power and Industry.
- Radioactive Waste Management.
- Environmental Monitoring.
- Medical Industry.
- Metrology and Calibration.
