

# GDF SUEZ

- Embracing genuinely responsible growth has become a primary concern in the 21st century. Energy lies at the heart of the challenge. In a world where the destiny of mankind and the future of energy are closely linked, the main goal of GDF SUEZ is to make energy a source of progress and development once again. Energy that is available to the greatest number, more reliable, better consumed, more respectful of mankind and the environment.
- For GDF SUEZ, an energy mix that includes nuclear energy is the best solution for guaranteeing power supply at a competitive price and contributing to a reduction in the release of greenhouse gas. GDF SUEZ is a pioneer in nuclear energy in Europe with first-class skills both upstream (engineering, purchasing, operations and maintenance) and downstream (waste management and decommissioning).
