

International Nuclear Services Limited (INS) is a wholly owned subsidiary of the Nuclear Decommissioning Authority (NDA) in the UK. INS has a dual role; as a commercial and contract management agency for the NDA and as the world's most experienced shipper of nuclear materials internationally.

As the NDA's commercial and contract management agent, INS manages contracts and relationships, on behalf of the NDA, with utility customers in the UK and overseas for services from the Sellafield site, such as the storage and recycling of irradiated nuclear fuel.

INS has safely transported radioactive cargoes worldwide for over 40 years. Our subsidiary company, Pacific Nuclear Transport Ltd is the world's most experienced shipper of nuclear materials with a fleet of INF3 class ships. We provide a complete transport service to our customers, from the design of nuclear transport packages through to transportation of nuclear materials using our dedicated fleet of ships.

INS provides complete solutions to customers for their irradiated nuclear fuel management and transportation needs. We have the capability to offer our customers a range of consultancy services, strategic assessments and feasibility studies on irradiated fuel management. We also advise utility customers and government agencies on their strategic and technical options relating to the nuclear fuel cycle.
