

SDMS

technologies

<http://www.sdms-technologies.com>

French medium-sized industrial company, leader in the fields of Nuclear, UHV and Cryogenics,
SDMS acquired ASTRIANE on December 2009.

SDMS continues its development through the purchase of ASTRIANE and strengthens its strategic position on the market of specific components and complex electromechanical assemblies for Nuclear, Defence, Research and Space Applications.

This acquisition allows SDMS to develop some new skills in the field of Special Machines and Automation for Nuclear, Research and Defence.

Located in southeast France in the Rhône-Alpes and Provence-Alpes-Côte-d'Azur regions, SDMS in Saint-Romans (38) and ASTRIANE in Manosque (04) remain two separate legal entities but are now operating under a common banner named "SDMS technologies".

This new industrial, multi-trade & human-sized (225 employees) group offers several advantages :

- A location near Cadarache, a strategic place with an international visibility, dedicated to energy sources that do not produce greenhouse gases (energy efficiency, renewable and nuclear energy).
- The ability to design and manufacture a wide range of sub-assemblies for many prime contractors such as Applied & Fundamental Research Centers (CEA, CERN, CNES, CNRS, ESA, ESO, ESRF, GANIL, ILL, KIT, ONERA, PSI, SCK-CEN, SOLEIL, TÜM, US LABS...) or Industrial Corporations (ALSTOM, AREVA, CNIM, COMEX, EDF, GENERAL ELECTRIC, KOBE STEEL, SAGEM, SUEZ, THALES, WESTINGHOUSE...).
